Introducing the SMU Economics Society
10th OIKOS Executive Committee

SMU-IMF Colloquium
“The Near-Term Economic Outlook for Asia and the Challenges of Escaping the Middle Income Trap”
New Year’s greetings to everyone! Having just completed my first year at SMU I’m looking forward to my second, with the benefit now of some familiarity with the annual cycle of activities.

I want to start this note by thanking the outgoing Oikos Exco, Wei Jie and his team, for their energy and commitment in organising activities and providing support to our undergraduate cohorts. I welcome the 10th Oikos Exco and look forward to engaging with them as they build on the efforts of the 9th. This year’s entering cohort was by far the largest in SOE’s history and we are moving to an aggregate steady state close to 1,000, so Oikos’s efforts to reinforce inclusiveness and collective wellbeing will become even more important.

A parallel development is taking place with our alumni and there is now an SOE alumni group within the SMU association. Alumni extend the networks created while at SMU and their experience is a valuable resource for current students. Networking Night, featured in an article in this issue, was one of the occasions for alumni to share their learning and experience since graduation. Listening to the exchanges taking place around the tables during the speed-dating sessions (this is as close as I’m likely to come to speed-dating) I was impressed by how quickly alumni have established themselves in positions of responsibility, a reflection of the skills and self-confidence acquired here. Elsewhere in this issue you’ll read accounts of wonderful international exchange experiences and rewarding internships, distinctively SMU advantages to be savoured.

There were many SOE events and developments during 2012 and I’ll mention just a few. In July the School was host to an international conference, the Asia Pacific Trade Seminars, which drew a record number of scholars from Asia, Australasia, North America and Europe and reinforced SOE’s international reputation. In October an academic SMU-IMF colloquium was co-hosted by SOE and SOSS, as reported in this issue. Among the many faculty highlights, research excellence awards for 2012 were given to Pao-Li Chang and Fali Huang, and Gea Lee received the teaching excellence award. SOE has been engaged in reviewing the curriculum for the Economics major and also our second majors in Applied Statistics and Actuarial Science, in conjunction with an overall review being undertaken of the entire SMU undergraduate curriculum. Enhancements to SOE offerings will be reported later in the semester.

Best wishes for the semester ahead. I look forward to meeting many of you in the coming weeks and for those of you in your final semester, I look forward to seeing you on stage in July!

Dean, School of Economics
The SMU-IMF Colloquium was hosted by the School of Economics and School of Social Sciences with the International Monetary Fund. The event was attended by some 100 people, including students from SMU as well as people from the public and financial sectors on 17 October 2012, Wednesday.

The colloquium began with a presentation of the IMF’s latest regional economic outlook for Asia, followed by a study on the middle-income trap presented by Romain Duval, Head of the Regional Studies Division of the Asia Pacific Department of IMF. The conference ended with an engaging closing panel discussion as panellists actively shared their views on the subject of middle income trap.

Romain Duval, Head of the Regional Studies Division of the Asia Pacific Department, presenting on IMF’s Latest Regional Economic Outlook.
Speakers

- Romain Duval, Head of the Regional Studies Division of the Asia Pacific Department, International Monetary Fund (IMF)

Invited Panellists

- Charles Adams, Visiting Professor, Lee Kuan Yew School of Public Policy
- Don Hanna, Managing Director, Fortress Investment Group
- Reza Siregar, Senior Economist, ASEAN+3 Macroeconomic Research Office (AMRO)
- Augustine Tan, Professor of Economics, Singapore Management University
- Bussarawan Teerawichitchainan, Assistant Prof of Sociology, Singapore Management University
- Ravi Balakrishnan, Resident Representative, International Monetary Fund (IMF)

The panellists had an engaging discussion. L-R: Charles Adam, Augustine Tan, Ravi Balakrishnan, Don Hanna, Romain Duval, Reza Siregar and Bussarawan Teerawichitchainan.
Founded by our pioneer batch of economics undergraduates in AY2002/03, the society is the student representative body of all SMU undergraduates reading the Bachelor of Science (Economics) Programme. All economics students in SMU are automatically a part of, and hence represented by, the SMU Economics Society (OIKOS).
The 9th Executive Committee stepped down from their year of service, during which many exciting new and revamped initiatives were implemented. Thank you and kudos to the 9th EXCO. Now, the 10th Executive Committee has been elected to take over their positions after a gruelling elections campaign that was held in September. They take office from January 1, 2013.

Stay tuned for our line-up of events this term.

Background to OIKOS

OIKOS was added to the name of SMU Economics Society by the 6th Executive Committee. OIKOS stands for home and family in Greek, representing the Society’s vision of uniting the SMU Economics community and establishing a home away from home for all. The “man” in the middle, which resembles a person jumping in the air, represents vibrancy, and it was adapted from our original logo. The right hand of the man reaches out to the sky, symbolizing our passion for excellence.
As a complement to last semester's Public Sector Networking Night, this semester was focused exclusively on the private sector. Alumni with diverse backgrounds in entrepreneurship, consultancy, banking advisory and investment analysis, to name a few, were present to network with our current crop of students. The event was attended by the Dean of the School of Economics, Professor Bryce Hool, Associate Dean, Professor Chow Hwee Kwan, Assistant Dean, Cheryl Lee and staff as well as over 50 Economics students.

Held at SMU's very own Basement Café, the event included a delectable buffet spread and finger food for attendees. Wines were also available for those seeking a little liquid courage to network better, and proved to be quite popular through the night.

To freshen things up, this semester's Networking Night introduced a new 'Speed-Dating' format for attendees, who could network with one Alumni member at a time based on their stated preferences, with swaps conducted every 15 minutes. Once 3 swaps were completed, attendees were able to freely network with anyone present at the event. With this format, it was easier for them to spend quality time networking with Alumni from their preferred industry.

With good food, wine and our ever-friendly Alumni members, the Networking Night turned out to be a roaring success. Alas, all good things must come to an end, and this was no exception. We would also like to take this opportunity to thank the School of Economics for their support in the event.
Early Matriculation for National Servicemen this year was held on 20 October 2012. This annual exercise aims to engage and re-connect coming-out-of-service NSMen who have accepted offers from our University two years ago.

The NSmen were invited to a breakout session with the School of Economics where they had the opportunity to interact with the Dean of the School of Economics, Professor Bryce Hool, Associate Deans, Professor Hoon Hian Teck and Professor Chow Hwee Kwan, Assistant Dean, Cheryl Lee, faculty, staff and senior SMU students. Associate Professor Tan Kim Song (Chair of SOE Teaching Excellence & JC Talks) gave a very good insight into our Economic programme as well as the career prospects of an Economics graduate, internship opportunities, exchange programmes, life in SMU etc.

The NSmen were then grouped into smaller cluster for further mingling.
Congratulations to the following faculty and staff on winning the SMU Long Service Awards.

**FACULTY**

Associate Professor Chang Pao-Li  
Professor Winston Koh  
Associate Professor Leung Hing-Man (Practice)  
Associate Professor Yang Zhenlin

**FACULTY**

Ms Rosie Ching  
Professor Kwong Koon Shing (Education)  
Dr Lin Ting Kwong  
Assistant Professor Zhang Haiping  
Assistant Professor Zhang Yi

**STAFF**

Ms Dione Ng  
Ms Thor Qiu Ling
Professor Winston Koh has been appointed as member of the Civil Service College’s Economics Experts Group at the Centre for Public Economics.

The mission of the Economics Experts Group is to advance economic methods in public policy by linking experienced economics practitioners with policy makers. They can provide advisory services to public agencies on framing the right economics questions, how to make use of existing data to perform analysis, or on specific areas of policy such as labour, productivity and trade.
In her research, Professor Chang identifies deep and concrete problems and applies the necessary theoretical and empirical tools to generate useful insights, typically in the field of international trade. In her "Risk and the technology content of FDI" paper, co-authored with Chia-Hui Lu, she highlights an important perspective on a firm's decision on foreign direct investment (FDI) that has been ignored by previous literature. In particular, when firms contemplate FDI in an emerging economy, they face the risk of failure in product quality control associated with their complicated production processes. Taking this factor into account, the paper develops a theoretical model highlighting the interactions between FDI and the South's technology frontier.
In her "WTO trade effect" paper, co-authored with Myoung-Jae Lee, she re-examines previous empirical studies which found that WTO membership has no statistically significant effect on trade. Addressing empirical shortcomings in earlier work with novel applications of non-parametric methods, her paper shows that WTO membership, indeed, does have a significant trade-promoting effect.

Publications in AY 2011 / 2012 by Chang Pao-Li

In her research, Professor Huang has tackled big questions. For example, what has shaped the historically observed political development path from monarchy to oligarchy and finally to democracy?
In her *International Economic Review* paper, she develops a model of long-run economic and political development, which is driven by technical features of production and political conflicts among factor owners on the division of output, to explain the historical observation.

In her *Journal of Law, Economics, and Organization* paper, she asks the question, "Why do societies differ in their relative use of relational and legal contracts?" She develops a political economy model of legal development, where the legal quality of contract enforcement is a public good to answer this question. She finds that legal investment tends to be too small under elite rule but too large under majority rule in comparison to the socially optimal level.

**Publications in AY 2011 / 2012 by Huang Fali**

With consistent effort to draw on real-life applications, and combining good humour with clear explanations, Professor Gea Lee has significantly raised his teaching effectiveness. While his courses are technically demanding, his students find him able to stimulate their interest in the subject and create a good atmosphere for learning in class.
Congratulations to Haiping and family on the arrival of their baby boy Leo!
The little prince arrived on 28 October 2012.
As the winter break was fast approaching, so were the examinations and project submission dates for the numerous students within the School of Economics. Week 13 is indeed a testing time for any SMU student, and it just didn’t get any worse than this.

Once again, this was when the SMU Economics Society (OIKOS) stepped in to deliver to all the students some much needed welfare and rejuvenate them for the final stretch in the semester. The OIKOS Welfare Drive this semester was held on **14 November 2012** at the School of Economics Level 2. The welfare pack included Bubble Tea, Famous Amos and Apple Pie from McDonalds. This event was also held in conjunction with the Wear-Your-OIKOS-Shirt Day, where many students took the opportunity to don their School of Economics shirts and display their unity and sense of pride. The event was truly remarkable as all the welfare packs were snapped up in a record breaking 33 minutes!

No matter how stressful Week 13 is, OIKOS would never fail to be here at SOE to sweeten up the week and to cheer our students on for the examinations. OIKOS thank you for lending us your support in both events and we look forward to bringing you bigger and better welfare packs next semester. Do enjoy your well-deserved winter break!
Congratulations to Zeng Tao, SOE PhD student who had received the SMU Presidential Doctoral Fellowship.

Research Interests:
Bayesian Model Selection,
Bayesian Dynamic Stochastic General Equilibrium Models

The SMU Presidential Doctoral Fellowship gives recognition to outstanding PhD students. Recipients of this competitive award are selected from the top five percent of PhD students across SMU.
Congratulations to Wang Xiaohu, SOE PhD Job Candidate who recently presented a paper with Professor Jun Yu at the North American Winter Meeting of the Econometric Society held in San Diego from Jan 4-6, 2013. This paper is co-authored by Xiaohu and Jun.

Research Interests: Financial Econometrics, Econometric Theory

Paper presented: Double Asymptotics for Explosive Continuous Time Models
During the month of May 2012, I received a letter that marked the start of an amazing journey through the heart of Africa. **University of Pretoria**, South Africa, accepted my application for the 2012/2013 Exchange Programme and I was extremely excited but apprehensive at the same time. Being one of the pioneer students from SMU to be studying in South Africa, I felt the need to represent the school well and also establish the path for future students who are interested in experiencing this beautiful continent. My coordinator from the university, Ms. Misiwe Moloi, was very helpful and I settled in straight away.

I had absolute freedom to choose whichever course I wanted, so I chose those that I can map back to SMU. The standard of education here is comparable to back home and classes are conducted in lecture style instead of the seminar class that we are used to. Nonetheless, professors do encourage students to speak up and participate actively.
Besides academics, my experience here had been absolutely wonderful. The different cultures, people and vast landscape filled with safaris and wildlife made this entire trip worthwhile. While I understand that people have an impression of South Africa as an unsafe destination, however it is on the contrary. Living here in Pretoria is safe and as long as one is cautious, South Africa is not as dangerous as people think it is. I travelled through the beautiful landscapes of South Africa, visited the Pearl of the Mother City, Cape Town and also ventured through Botswana and Zimbabwe towards the Victoria Falls.

Many students may choose not to travel halfway around the world alone, but in my opinion, that had been the most rewarding decision of my life. Coming to South Africa, I met many friendly and beautiful people from all over the world. I made amazing friendships that I will always cherish, friendships I would not have otherwise forged if I had chosen to travel with just my own group of Singaporean friends. This December, I will be travelling alone once more to Kenya to volunteer my time at an orphanage, to give back what this beautiful continent has offered to me.

As a student, as well as a previous OIKOS Ex-Co member, I would encourage all students to venture out of their comfort zone and re-discover the world. Get a better perspective of life and understand the different cultures this world has to offer, even if it means to places where nobody has gone before you.
It was like a dream, having spent 6 months in Paris and now back in Singapore. Everything just seemed so surreal when I looked back at the photos of my adventure. I remembered being excited yet at the same time scared when I first received the acceptance email from my host university, Paris Dauphine University. I was excited because I will be going to Paris, one of the most beautiful cities in the world with rich historical culture; but I was also scared of the language barrier as communication is vital in a foreign land.

Fortunately, my host university had arranged for a buddy to help me assimilate into the Parisan lifestyle. They also organised a one-week crash course to teach us basic French. I learnt to get by with my elementary French and occasionally consulting the bible – Google Translate.

The university teaching culture is very similar to SMU. A small class size that allows the professors to provide the much appreciated personal touch that makes lessons more engaging. They also understood that we as exchange students, are from different backgrounds and hence they were always patient with us.
Like academics, experiencing the culture of the city definitely forms a huge part of the exchange experience. Mention Paris to anyone and the usual romantic Eiffel Tower and the grand Musée du Louvre will pop into mind; and that is exactly where I went. No words can describe the feeling I had when I first emerged from the Metro station and took in the sight of these magnificent creations. But that is not all that Paris has to offer. Besides visiting the historical landmarks, staying in a city for such a long period of time allowed me to explore places where the typical tourist would not have visited.

When spring arrived, the French love to take advantage of their cooling weather to experience the outdoors open grass patches. This is something that I could never have done comfortably in Singapore’s weather. Picnics here are very common and it is a very different way of hanging out; to have a meal and getting to know each other better.

All in all, this once in a lifetime experience in Paris will be etched in my mind forever. À bientôt Paris!

---

**Let’s learn French**

- **Hello**
  - Bonjour (Formal) / Salut (Informal)
- **Thank you**
  - Merci
- **Goodbye**
  - Au revoir (Formal) / Salut (Informal, same word as hello)
- **À bientôt**
  - See you soon
Exchange has been such an amazing chapter of my life. The USA has a vibrant culture, and has given me many opportunities to play, to laugh, to work – and in the process – learn about the world and my personal values.

Studies wise, the quality of education at Emory is high, and you could choose classes taught by brilliant and inspiring professors. My professor who taught fixed income is an adjunct who runs a hedge fund, and my professor who taught economic development had many years of policy experience on the field. The industry experience that they brought into the classroom made their teachings very engaging and helpful.

Exchange also allowed more opportunities for travel and extra-curricular activities. There were students from many different countries on exchange here, and we did many things together, such as cooking, traveling, shopping, and watching American sports like baseball and football. Just sharing our lives with each other has taught me a lot, and broadened my mind.
Cliché as it sounds, exchange is a wonderful journey of growth and discovery. Breaking out of routine and immersing myself in a new environment has allowed me to discover many things about myself. For all my juniors who have the chance to go on exchange, grab the opportunity and go! Think about what you want to get out of your exchange and actively make choices – for example if you want to make new friends, then do something like bidding for classes on your own, and taking the initiative to make conversation. Before you know it, your time on exchange would have come to an end. Have fun!
When most graduates are asked to name their top career choices, the insurance industry is not one that immediately springs to mind. In fact, most graduates may not be very familiar with the insurance industry at all. However, in my third year in SMU, when the opportunity arose, I chose the path less taken and have found it to be extremely rewarding indeed.

During that period, I interned at Tokio Marine Life Insurance Singapore Ltd, a dynamic rising player in the local insurance industry. You might remember them from their prominent advertisements on the many taxi cabs that we see around Singapore.

The period when I was attached to their actuarial department was an eye-opener for me, as I have no prior knowledge or background in Insurance or Actuarial Science. It also provided some of the biggest learning experiences for me. The actuarial department is responsible for the pricing of insurance products. Using mortality and morbidity tables, they ensure that products are properly priced to reflect the risk involved, a process involving much statistics. Actuaries also play other roles such as valuation and risk management in terms of ensuring that there are sufficient reserves to fulfill the company’s obligation to policyholders. During this period, I gained more insight into the unique role of actuaries and the important work that they do for insurance companies like Tokio Marine, working on projects like reviewing and cataloguing the Tokio Marine’s products into a huge and accessible database. Additionally, I also gained more knowledge about insurance products, about their function as important risk management tools for the public and also acquired a deeper understanding of technical terms like Non-participating funds, convertibility etc.
It was not all work only though as I also had a lot of fun with my colleagues, who were very warm in welcoming me and answering any queries I had. The office culture was very friendly and the company really looked after the learning and development aspect of each employee. The friendly and open office culture was in fact a big factor that led me to join Tokio Marine as a permanent staff upon graduation as part of their Management Associate programme.

All in all, I am extremely glad to have had this valuable internship experience with Tokio Marine and I have no regrets about my choice at all.
Under the Global Internship Program (GIP), hosted by the General Insurance Association of Singapore (GIA) and funded by the Monetary Authority of Singapore (MAS), I was placed with Lockton Companies (Singapore) Pte Ltd for a period of 8 weeks and another 2 weeks over in Lockton Companies (London).

Lockton is part of the GIP as the world’s largest privately owned insurance brokerage firm. Lockton has a resounding presence in Singapore as one of the leading insurance brokers who provide clients with timely insurance and risk management advice.

Through the interview session that I had with my mentor, Nick Garrity, CEO of Lockton Singapore, I was well aware that the structured organization of the company, coupled with Nick’s dedicated guidance, would allow me to gain a wealth of experience and vast insights into an industry that I might look towards in the future. However, I was also concerned if such a placement in a brokerage firm could fulfill my initial objectives of giving me a better understanding of the role that Actuaries play. Despite my mixed feelings, I was more than willing to give myself a chance at learning something new.
My internship stint was a whole new experience for me as my mentor was of the notion that it would be more beneficial for me to work on projects that required urgent assistance, rather than shadowing various departments to undergo the typical day in a broker’s life. This meant that I was under the direct supervision of the CEO and not attached to any particular unit to allow for greater facilitation of interaction. As a result, I was required to take brave steps out of my comfort zone and delve into the projects assigned as I had to liaise with various colleagues in the different departments to get the job done.

During the 10 weeks, I had the privilege to participate in several projects ranging from:

1. Acting on behalf of the Singapore Contract Certainty Working Group (CCWG) to obtain first-hand information from London insurance market contacts
2. Assisting clients to ease through the transition phase of appointing a new broker
3. Working on the proposal targeted at a RFP tendered out by a new client
4. Acquiring relevant information and statistics to support the launch of new products

Through this comprehensive project, I had the opportunity to have a broader picture about the General Insurance industry, as I had the opportunity to speak to many underwriters, brokers, members of the different trade associations in London, etc. I also got to learn more about myself and grow as an individual as there was minimal hand holding throughout the process. All of these could not have been possible if not for the complete trust that my mentor, Nick Garrity, CEO of Lockton, had in me to go ahead with the project. The overall GIP experience has been truly wonderful and an excellent step into the world of General Insurance.

OIL PRICE VOLATILITY AND THE SINGAPORE MACROECONOMY

Published 18 September 2012

We construct a realized volatility measure, using prices of daily West Texas Intermediate (WTI) crude oil futures and illustrate the robustness of this oil price volatility–macroeconomy relationship under a multivariate co-integrated vector autoregressive (VAR) model. Empirical results suggest that a spike in oil price volatility leads to investments and aggregate output to decline and inflation to rise over the period from 1983Q2 to 2009Q2. Furthermore, the gradual decline of Singapore’s oil intensity signals a weakening relationship between oil price and the macroeconomy that supports our empirical findings.

Keywords: Oil price volatility; Singapore macroeconomic performance; multivariate VAR; impulse response function; oil intensity.

JEL Classification: C32, E32, Q43
It was the best of time; it was the worst of time. Such is the perfect description of summer 2007 when I, along with my peers from the graduating class of that year, joined the financial services industry. The market, blossoming on the back of years of booming economic activities, welcomed us with open arms. But at the same time, a crisis, which proved deadly later on, was in the brewing and about to wreak havoc around the globe. I have to say that it was fortunate for us to have witnessed and participated in perhaps one of the most eventful periods in the financial history, but it also meant that many of us, including myself, had a choppy start in our career.

Having worked in the investment management business since I graduated, my career was briefly disrupted by the massive restructuring that hit many financial institutions during the crisis. But as God closes one door, He does open another for you. The situation took a turn for the better, when I took an opportunity to relocate to Hong Kong as an institutional sales manager for a global asset management company.

When many of us were asked why we would choose SMU over the more established Economics programs in town, the honest answer is that we didn’t know. But after four well spent years at the SESS, I can testify that it’s the open-architecture design of the curricular that truly makes the SMU Economics degree stand out. There are three factors behind the success of the program and its graduates. First of all, of course, is the academic rigor ensured by the presence of a very strong faculty, hailing from the world’s top Economics PhD programs; secondly, the open discussion in class, made possible by the seminar-style of
teaching, helped sustain students' interest in some of the seemingly most “boring” economics subjects; last but not least, the freedom to combine courses from other schools enabled a pragmatic understanding of Economics, which is critical to those who would pursue a career other than academic research. When still in school, I took many of these “for granted”, and it wasn’t until I joined the workforce did I start to discover how the strong self-learning and problem-solving skills I picked up in university were about to benefit me in a lasting way.

Today, many of the SESS alumni have made remarkable advancement in their career. They had varied career entry points, from policy making to market making, from selling stocks to selling cakes, but one thing they share in common is a very strong passion in what they do, and consequently, an unswerving faith in becoming the very best in their respective fields. In job hunting, it is far too easy and common for graduating students to fall into the “starting pay trap”. To this, my advice is to evaluate carefully your own strengths and weaknesses, not just in technical aspects but also in terms of personality, and examine whether you are likely to excel in what you are about to choose to do. A higher starting pay gives you a 10-meter head start in a marathon race, and how well you do in the race depends more on interest and suitability. No one can write off the importance of monetary rewards, but that is something that comes along naturally, rather than chased after.

The School of Economics and Social Sciences (SESS) was established on 1 July 2002 to launch the Bachelor of Science undergraduate degree programme majoring in Economics, and subsequently the Bachelor of Social Science undergraduate degree programme. In April 2007, the School of Economics and the School of Social Sciences were established as separate schools to focus on the development of the undergraduate and graduate curriculum and programmes, as well as faculty research.
Graduation promised a cushy job that I had been lucky to land after 7 rounds of interviews and I happily showed up for work with great anticipation. This is what we all went to school for 16 years for, right? The environment was friendly and I learnt from my colleagues as well as superiors. It was not long after however, that my longing to fulfill my passion could no longer be suppressed and after seeking advice from superiors and friends, it was time to dedicate some of my years to some risk!

Against all advice rendered by my elders, I decided that it was time to leave the safety net of a corporate job and step out into the business world. I was lucky enough to find someone like minded who landed up being my business partner and together we challenged the skeptics a plenty. It was tough at a start with neither of us having a clue what we were doing. Being young and being girls, naturally there were few who took us seriously. It was mainly the soft skills from interactions in school that made things happen. I had learnt to work with people and about presentations to get people to take us seriously and begin to trust us and sell us stuff! Don't underestimate the value of image!
It also did not help that our greatest mentor was not a person but in fact, Google. Somehow or other, we managed to secure a shop as well as suppliers. Step by step along the way, we adapted to meet the daily challenges of running a business. Adaptation is probably our greatest asset, with an open mind being key. Today, I am proud to stand by Strictly Pancakes and could not be happier to be a part of it.
